SUMMARY

Informatics Engineering graduate from Universitas Surabaya with hands-on experience building web-based business systems for real clients, from requirements gathering to testing and deployment. Seeking a Web Developer role to build reliable applications for everyday business needs.

AREAS OF EXPERTISE

Web Development: PHP, Laravel, JavaScript, React, HTML & CSS, C#

Database & Tools: SQL, PostgreSQL, Supabase, Git, GitHub, Claude Code (AI-assisted development), Microsoft Office

Data & AI: Python, TensorFlow, Pandas, NumPy, Data Analysis

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Freelance)
HanziLearn, Mandarin Tutoring Management App, Oct 2026

- Built a full-stack web app (React, Supabase) for a private Mandarin tutor with teacher and student roles: student records, recurring lessons with reminders, homework with photo submissions, invoicing, monthly progress reports, and HSK vocabulary practice with spaced repetition.
- Secured per-role data with PostgreSQL Row Level Security, and implemented an installable PWA with Web Push notifications (iOS and Android) and automated lesson reminders using pg_cron.
- Deployed on Cloudflare Workers and Supabase, with 216 automated tests and a 35-page user manual.

Office Finance System Developer
Freelance, May 2026 - Oct 2026

- Designed and developed a web-based financial management system (PHP, Laravel, MySQL) that replaced manual office bookkeeping: income and expense records with receipts, budgets, a monthly cash book, PDF and Excel reports, and printable vouchers, customized to direct client requirements.
- Implemented four roles with an approval workflow, mandatory two-factor authentication for admin and finance, period locking, an activity log, and safe simultaneous use (atomic reference numbers, version checks), tested with 16 parallel processes.
- Delivered independently from requirements gathering to deployment, with 840+ automated tests and CI, encrypted daily backups with a restore drill, and operations and user guides.

Web Developer (Campus Internship Program)
FL Beauty, Dec 2025 - Jul 2026

- Developed a Sales & Purchase Information System (PHP, MySQL) for a skincare retailer in a university internship (Kerja Praktik), working with a fellow student to build the software the business needed.
- Built batch-level inventory with expiry dates (a paid sales note deducts stock from the batch nearest to expiry), size variants, suppliers, printable notes, and a customer storefront with automatic near-expiry discounts, a cart, and ordering via WhatsApp.
- Designed the database (13 tables) and workflows from business requirements, documented with 15 wireframes and a BPMN diagram.

EDUCATION

Universitas Surabaya, Surabaya, Aug 2022 - Aug 2026
Bachelor of Computer Science (S.Kom), Informatics Engineering, specialization in Data Science and Artificial Intelligence
GPA: 3.351 / 4.00
